

Overnight Aires in Car Parks

Recommended parking bays for dual use sites

3.5m

2.8m

3.5m

Motorcaravans are less than 2.5m wide thus a bay of 3.5m allows a unit parked in the centre of the bay to have 0.5m both sides. This allows access to and from the vehicle. A 2.8m gap between bays gives min of $0.5 + 2.8 + 0.5 = 3.8\text{m}$ spacing.

As there are no external fixtures this achieves the min 3m recommended fire break and allows for a car to use the bay when used as a car park during the day but keeps it clear when used at night as an Aire.
